

# We make time for any business.

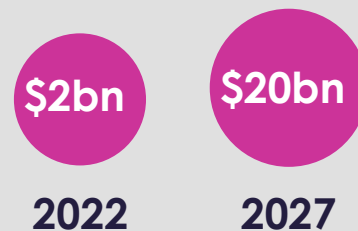

Imagine an employee who works 24 hours a day, 7 days a week and 365 days per year. Who never takes holidays or gets sick. And who never makes a mistake.

At FD Intelligence we make time for our clients. We utilise Robotic Process Automation (or RPA), which is software that automates routine & repeatable business processes.

## Why consider RPA?

The RPA market is predicted to grow 10x over next 5 years...

- And it's not just for big businesses, we have already worked with:**
- Multiple sectors
  - Various departments
  - Differently sized businesses

- Delivering real benefits:**
- 3-9 month ROI
  - Average 30% cost saving
  - Reduction of 48% on tedious tasks

- Which have delivered:**
- Time saving & greater capacity.
  - Happier employees and clients.
  - Increased revenue & profit.

"FD Intelligence have significantly impacted the efficiency of our business. Having spent the time to truly understand our business processes, they were able to identify priority areas where RPA could be utilised. They then built and deployed the robots which have made a significant impact on our overall efficiency."

**Robert Ross, Managing Director,  
Alexander Ross Holdings.**
